There is a Way to
Manage Electricity Costs

It's Simply a Matter of Accurately Submetering

Allocate Energy Costs Identify and measure electricity usage by building, department, tenant, or even individual circuit.

Decrease Unnecessary Usage Pinpoint where lights are being left on...and when your HVAC and other equipment should be off.

Reduce Energy Consumption Obtain proof positive of excessive and inefficient electricity usage to show your tenants or managers, enabling them to implement programs that will reduce consumption and save costs.

Document Conservation Efforts Acquire information that can be used to benchmark the effectiveness of energy conservation management plans.

Pay Only for
Individual Energy Usage

Give Your Clients Real Reasons to Reduce Their Electric Bills

Assign Accountability Document energy costs by individual users, providing the dollars and cents incentives for them to use electricity more efficiently.

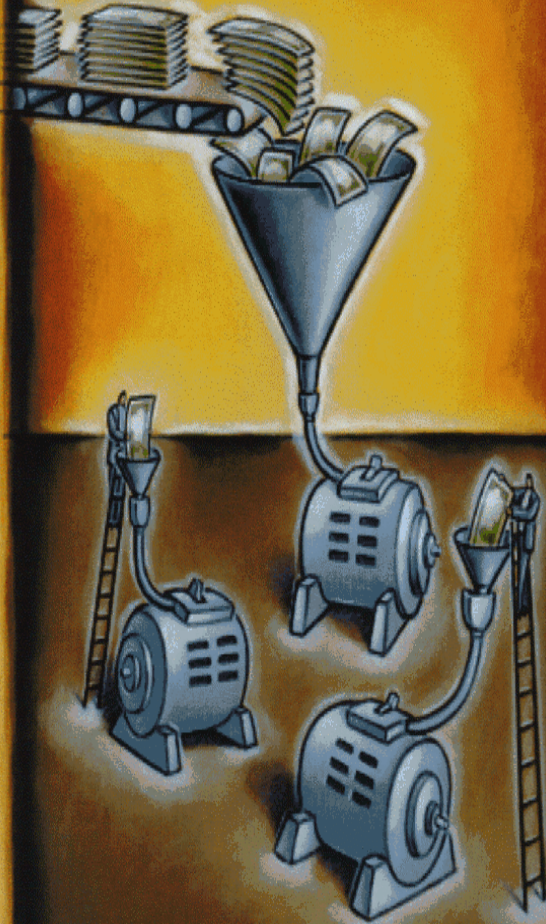

Provide Custom Billing Create “electric bills” that precisely allocate energy costs to your tenants or departments, invoicing them for the actual electricity they use.

Eliminate Guesswork Do away with old-fashioned billing methods such as charging by the square foot, or taking the total bill and dividing by the number of tenants.

Monitor Consumption Develop effective energy management programs your tenants can use to reduce consumption and save money.

Spot System Inefficiencies

It's No Problem When You Have Information at Your Fingertips

- **Pinpoint Inefficient Equipment** Spot when specific equipment is operating inefficiently by its excessive energy usage.

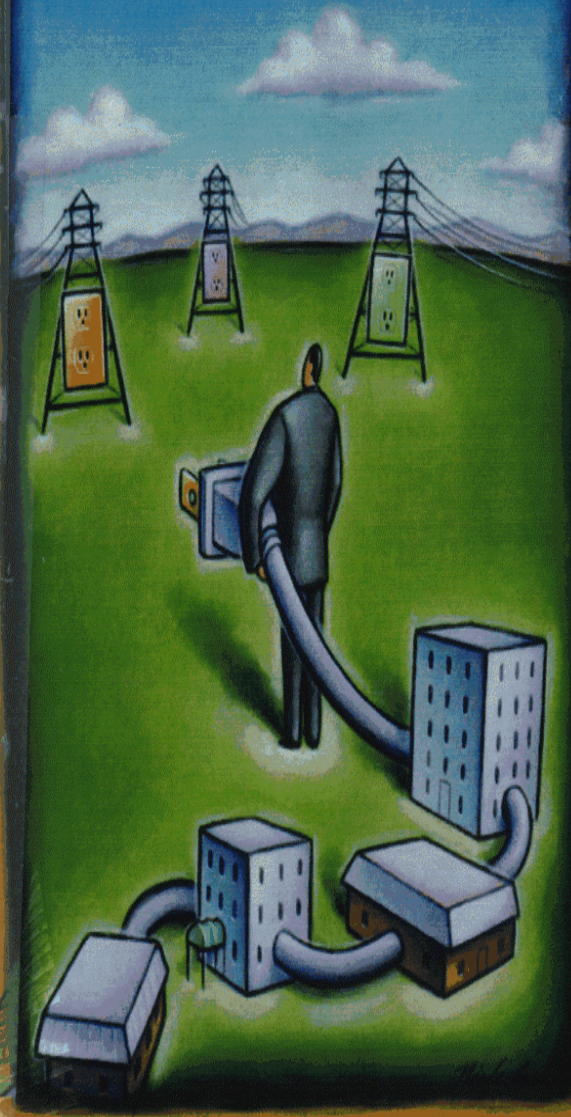

Preventive Maintenance Confirm when excessive energy consumption is caused by improperly functioning equipment. Use this information to replace failing parts...improving equipment performance while extending effective service life.

Document Electricity Use Use information to verify your energy-efficient operations and practices; and to enhance the accuracy of reporting methods. Easily obtain this information from any location using the Internet.

Save Money Decrease the peak demand charges that often are a substantial portion of a building's electric bill... and take advantage of utility rate structures by shedding loads during peak demand periods.

*Deregulation Provides
the Power to Choose*

Use Information to Select the Most Economical Energy Provider

Develop an Energy Profile Document the daily levels of electricity usage, putting you in a favorable position to negotiate the most economical rates.

Establish Load Shedding

Know the exact time to shed noncritical loads to reduce your energy provider's peak demand charges.

Include Multiple Site Aggregation

Increase your negotiation and buying strengths by grouping locations together to buy power from a single supplier.

Enhance Rate Negotiation Position

Document your historical consumption patterns and compare this data with the energy provider's rate structures to select the most economical offering.

Intelligent Submetering Solutions Are Here...

Measuring Energy So You Can Manage It

Submetering solutions provide information you can use to manage energy consumption and lower your bills for electric, water, and gas.

This information is received from submetering devices that are quickly and easily installed in your new or existing electrical distribution equipment, no matter who the manufacturer was.

Consequently, easy access to highly accurate and cost-effective measurement of energy usage by individual tenant or department is now possible...in malls, office complexes, apartment buildings, medical facilities, industrial parks, colleges and universities... anywhere.

Now is the Time to Get a Head Start on Submetering

Call us at 1-888-APC-8202 for submetering solutions details...plus information on application software, billing/energy analysis and installation/start-up services. Visit our website at www.cutlerhammer.eaton.com/apc
